2.4GHz ComTennal™ 14dBi

CTII-2450-14

This panel antenna delivers extended access point range in a single floor environment ideally positioned in the corner of a building. It functions from point-to-point so that you can wirelessly connect LANs between the buildings in a campus-type environment. It provides multiform transmission when placed on a Wall, as the higher powder output extends the range through typical flooring materials
